

Bahadır Koşapınar

Systems & Distributed Systems Intern · Atatürk University '28

kosapinarbahadir@gmail.com · +90 544 246 16 07 · github.com/jackthepunished · Erzurum, Turkey

TECHNICAL SKILLS

Languages: Rust, Go, C++20, Python, SQL

Systems: Distributed systems, concurrency, gRPC/protobuf, REST APIs, message queues, Linux

Infrastructure: Docker, Kubernetes, Prometheus, Grafana, PostgreSQL, Redis, Nginx

Concepts: Consistent hashing, gossip protocol, RBAC, scalable architecture, CI/CD

EXPERIENCE

Founding Engineer · [E-Meydan](#)

Sep 2025 – Present

- Architected and shipped a scalable web/mobile platform from zero to 10K+ users — owned backend design, infrastructure stack, CI/CD pipelines, and App Store / Play Store releases.
- Sole engineer in an early-stage environment; every system design decision had direct, measurable product impact.

Robotics & Mobile Developer · [Eagleye Robotics](#)

Aug 2025 – Present

- Designed low-latency communication protocols and concurrent data pipelines for EagleServe, a real-time robot control system — sub-100ms teleoperation over mobile networks.
- Built a SLAM data processing pipeline with concurrent ingestion and live visualization of occupancy grids on edge devices; owned hardware/software integration and production debugging.

Open Source Contributor · [Hive \(YC W26\)](#) · [Expo](#)

2025 – Present

- Shipped bug fixes and hardening patches to Hive, a YC-backed distributed agent framework, and to Expo — navigating large Go/Python/TypeScript production codebases under active review.

PROJECTS

Horizon Engine — C++20 · Vulkan 1.3 · GLSL · Jolt Physics · Linux

- Built a 3-D game engine from scratch in C++20: custom memory allocators, ECS architecture, Vulkan RHI abstraction, and an async asset pipeline — core systems work, not just graphics.

Brokkr — Rust · gRPC · Bazel Remote Execution API v2

- Implemented the Bazel Remote Execution API v2 (protobuf/gRPC) from scratch in Rust: distributed build grid with content-addressable caching, worker scheduling, and concurrent task dispatch across Linux machines.

The Cloud — Go · Docker · Kubernetes · PostgreSQL · Open vSwitch

- Hardened a production-grade open-source IaaS platform in Go: diagnosed and fixed bugs across distributed storage (consistent hashing, gossip protocol), VPC networking (Open vSwitch), and managed Kubernetes — 3,785-commit active codebase.

EDUCATION

B.Sc. Computer Engineering · [Atatürk University](#)

Expected 2028 · Erzurum, Turkey · Taught in English

ACHIEVEMENTS

Honorable Mention — Harvard Model Congress Europe · Madrid, Spain · 2022
